

## Contents

### **Açaí (Euterpe oleracea Mart.)**

*C M G Bichara, Federal Rural University of Amazonia and H Rogez, Federal University of Pará, Brazil*

- Introduction
- Fruit ripening, seasonality and accumulation of anthocyanins
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Microbiological and physiological disorders
- Pathological disorders, insect pests and their control
- Postharvest handling practices
- Processing practices
- Conclusions
- References

### **Acerola (Malpighia emarginata DC.)**

*M Mohammed, University of the West Indies St Augustine Campus, Trinidad*

- Introduction
- Fruit growth and development
- Preharvest factors affecting fruit quality
- Postharvest factors affecting quality
- Physiological disorders
- Pathological disorders and pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Achachairú (Garcinia humilis (Vahl) C. D. Adam)**

*O Duarte, National Agrarian University, Peru*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Ackee fruit (Blighia sapida Konig.)**

*M A Emanuel and N Benkeblia, University of the West Indies Mona Campus, Jamaica*

- Introduction
- Toxicity of ackee fruit
- Fruit maturity
- Biochemical composition
- Food and other uses
- Processing
- Economic importance
- Conclusions

- Acknowledgements
- References

### **Aonla (*Emblia officinalis* Gaertn.)**

*S Pareek, Maharana Pratap University of Agriculture and Technology, India and L Kitinoja, Extension Systems International, USA*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Arazá (*Eugenia stipitata* McVaugh)**

*J P Fernández-Trujillo, Technical University of Cartagena, Spain, M S Hernández, M Carrillo and J Barrera, Amazonian Institute of Scientific Research Sinchi, Colombia*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Assyrian plum (*Cordia myxa* L.)**

*T Al-Ati, Kuwait Institute for Scientific Research, Kuwait*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality indices
- Postharvest handling factors affecting quality
- Conclusions
- References

### **Avocado (*Persea americana* Mill.)**

*E M Yahia, Autonomous University of Queretaro, Mexico and A B Woolf, The New Zealand Institute for Plant & Food Research, New Zealand*

- Introduction
- Fruit development and postharvest physiology
- Maturity, quality at harvest and phytonutrients
- Preharvest factors affecting postharvest fruit quality
- Postharvest handling factors affecting fruit quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices

- Processing
- Conclusions
- References

### **Bael (*Aegle marmelos* (L.) Corr. Serr.)**

*S K Roy and S Saran, Amity University, India and L Kitinoja, Extension Systems International, USA*

- Introduction
- Preharvest physiology
- Postharvest physiology
- Quality components
- Postharvest handling
- Processing
- Physiological disorders
- Pathological disorders
- Conclusions
- References

### **Banana (*Musa* spp.)**

*A K Thompson, formerly of Cranfield University, UK, University of Asmara, Eritrea and Windward Islands Banana Development and Exporting Company, St Lucia*

- Introduction
- Postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting quality
- Postharvest factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Black sapote (*Diospyros digyna* Jacq.)**

*E M Yahia and F Gutierrez-Orozco, Autonomous University of Queretaro, Mexico*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Breadfruit (*Artocarpus altilis* (Parkinson) Fosberg)**

*C M S Carrington, University of the West Indies, Barbados, R Maharaj, University of Trinidad and Tobago, Trinidad and C K Sankat, University of the West Indies St Augustine Campus, Trinidad*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality

- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Breadnut (*Artocarpus camansi* Blanco)**

*M Mohammed and L D Wickham, University of the West Indies St Augustine Campus, Trinidad*

- Introduction
- Breadnut physiology
- Maturity and quality components and indices
- Postharvest handling practices and postharvest factors affecting quality
- Packinghouse practices, storage and shipping conditions
- Fresh-cut processing
- Future trends
- References

### **Cactus pear (*Opuntia* species)**

*E M Yahia, Autonomous University of Queretaro, Mexico and C Sáenz, University of Chile, Chile*

- Introduction
- Opuntia fruit
- Fruit development and postharvest physiology
- Physiological disorders
- Diseases, rots and insect pests
- Physical damage
- Quality characteristics and criteria
- Postharvest treatments, cooling and storage
- Packaging, modified atmospheres (MA) and controlled atmospheres (CA)
- Processing
- Conclusions
- References

### **Cajá (*Spondias mombin* L.)**

*R A Mattietto, Embrapa Eastern Amazon, Brazil and V M Matta, Embrapa Food Technology, Brazil*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Camu-camu (*Myrciaria dubia* Kunth McVaugh)**

*M S Hernández, M Carrillo and J Barrera, Amazonian Institute of Scientific Research Sinchi, Colombia and J P Fernández-Trujillo, Technical University of Cartagena, Spain*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices

- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Cape gooseberry (*Physalis peruviana* L.)**

*G Fischer and A Herrera, National University of Colombia and P J Almanza, Pedagogical and Technological University of Colombia, Colombia*

- Introduction
- Preharvest factors affecting fruit quality
- Postharvest physiology and quality
- Postharvest handling factors affecting quality
- Crop losses
- Processing
- Conclusions
- References

### **Carambola (*Averrhoa carambola* L.)**

*O Warren and S A Sargent, University of Florida, USA*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insects and other pests
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Cashew apple and nut (*Anacardium occidentale* L.)**

*A D Berry and S A Sargent, University of Florida, USA*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Conclusions
- Acknowledgements
- References

### **Chili plum (*Spondias purpurea* var. *Lutea*)**

*M Mohammed, University of the West Indies St Augustine Campus, Trinidad*

- Introduction
- Fruit development and postharvest physiology

- Maturity indices and quality components
- Preharvest factors affecting fruit quality
- Postharvest factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

**Citrus spp.: orange, mandarin, tangerine, clementine, grapefruit, pomelo, lemon and lime**

*M El-Otmani and A Ait-Oubahou, Agricultural and Veterinary Institute Hassan II, Morocco and L Zacarias, CSIC, Spain*

- Introduction
- Fruit development and postharvest physiology
- Composition, maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect and pest mites and their control
- Postharvest handling practices
- Processing
- Safety issues and quality assurance
- Best harvest and postharvest practices
- Conclusions
- References
