

## Contents

### **Mangosteen (*Garcinia mangostana* L.)**

*S Ketsa, Kasetsart University, Thailand and R E Paull, University of Hawaii at Manoa, USA*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Harvesting practices
- Postharvest operations
- Processing
- Conclusions
- Acknowledgements
- References

### **Melon (*Cucumis melo* L.)**

*M E Saltveit, University of California, Davis, USA*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting fruit quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Nance (*Byrsonima crassifolia* (L.) Kunth)**

*O Duarte, National Agrarian University, La Molina, Peru*

- Introduction
- Fruit development and post harvest physiology
- Maturity and quality components and indices
- Pre harvest factors affecting quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Post harvest handling practices
- Processing
- Conclusion
- References

### **Noni (*Morinda citrifolia* L.)**

*A Carrillo-López, Autonomous University of Sinaloa, Mexico and E M Yahia, Autonomous University of Queretaro, Mexico*

- Introduction
- Fruit growth, development and maturation
- Preharvest conditions and postharvest handling factors affecting quality
- Pathological disorders

- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Olive (*Olea europaea* L.)**

*C H Crisosto and L Ferguson, University of California, USA and G Nanos, University of Thessaly, Greece*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Harvest operations
- Packinghouse handling practices
- Grades and standards for processed olives
- Recommended storage and shipping conditions
- Processing
- Conclusions
- References

### **Papaya (*Carica papaya* L.)**

*S P Singh, Curtin University of Technology, Australia and D V Sudhakar Rao, Indian Institute of Horticultural Research, India*

- Introduction
- Fruit development and postharvest physiology
- Maturity indices
- Preharvest factors affecting fruit quality
- Postharvest factors affecting fruit quality
- Physiological disorders
- Postharvest pathological disorders
- Postharvest insect-pests and phytosanitary treatments
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Passion fruit (*Passiflora edulis* Sim.)**

*W C Schotsmans, Institute of Agricultural Research and Technology, Spain and G Fischer, National University of Colombia, Colombia*

- Introduction
- Pre harvest factors affecting fruit quality
- Postharvest physiology and quality
- Postharvest handling factors affecting quality
- Crop losses
- Processing
- Conclusions
- References

### **Pecan (*Carya illinoensis* (Wangenh.) K. Koch.)**

*A A Gardea and M A Martínez-Téllez, Research Center for Food and Development and E M Yahia, Autonomous University of Queretaro, Mexico*

- Introduction

- Nutritional value of pecan nuts
- Harvesting, handling and storage
- Current quality grading system
- In-shell and shelled pecan
- Description of main quality attributes
- Storage
- Postharvest physiology factors affecting nut quality
- Potential improvement in handling
- Processing
- Conclusions
- Acknowledgements
- References

### **Persimmon (*Diospyros kaki* L.)**

*A B Woolf, The New Zealand Institute for Plant & Food Research Limited, New Zealand and R Ben-Arie, Israel Fruit Growers Association, Israel*

- Introduction
- Fruit development and postharvest physiology
- Maturity, quality at harvest and phytonutrients
- Preharvest factors affecting postharvest fruit quality
- Postharvest handling factors affecting fruit quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Pineapple (*Ananas comosus* L. Merr.)**

*A Hassan and Z Othman, Malaysian Agricultural Research and Development Institute (MARDI), Malaysia and J Siriphanich, Kasetsart University, Thailand*

- Introduction
- Fruit development and postharvest physiology
- Physical and biochemical changes during maturation and ripening
- Preharvest factors affecting fruit quality
- Postharvest factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- Acknowledgements
- References

### **Pistachio (*Pistacia vera* L.)**

*M Kashaninejad, Gorgan University of Agricultural Sciences and Natural Resources, Iran and L G Tabil, University of Saskatchewan, Canada*

- Introduction
- Physiological disorders
- Postharvest pathology and mycotoxin contamination
- Postharvest handling practices
- Processing of fresh pistachio nuts
- Processing of dried pistachio nuts
- References

### **Pitahaya (pitaya) (Hylocereus spp.)**

*F Le Bellec and F Vaillant, Centre for Agricultural Research and Development (CIRAD), France*

- Introduction
- Uses and market
- Botany, origin and morphology
- Cropping system
- Cultivation techniques
- Pests and diseases
- Quality components and indices
- Postharvest handling factors affecting quality
- Processing
- Conclusions
- References

### **Pitanga (Eugenia uniflora L.)**

*M Vizzotto and L Cabral, Brazilian Agricultural Research Corporation (EMBRAPA) and A Santos Lopes, Federal University of Pará, Brazil*

- Introduction
- Postharvest physiology
- Maturity and quality components and composition
- Postharvest handling factors affecting quality
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Pomegranate (Punica granatum L.)**

*M Erkan, Akdeniz University, Turkey and A A Kader, University of California, Davis, USA*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Rambutan (Nephelium lappaceum L.)**

*M M Wall, US Department of Agriculture, Agricultural Research Service (USDA ARS), USA, D Sivakumar, Tshwane University of Technology, South Africa and L Korsten, University of Pretoria, South Africa*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing

- Conclusions
- References

### **Salak (*Salacca zalacca* (Gaertner) Voss)**

*S Supapvanich, Kasetsart University, Thailand, R Megia, Bogor Agricultural University, Indonesia and P Ding, University of Putra Malaysia, Malaysia*

- Introduction
- Fruit development and postharvest physiology
- Changes in quality components during maturation
- Preharvest factors affecting fruit quality
- Postharvest factors and physiological disorders affecting fruit quality
- Postharvest pathology and entomology
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Sapodilla (*Manilkara achras* (Mill) Fosb., syn *Achras sapota*, L.)**

*E M Yahia and F Guttierrez-Orozco, Autonomous University of Queretaro, Mexico*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and índices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References

### **Soursop (*Annona muricata* L.)**

*M A Coêlho de Lima and R E Alves, Brazilian Agricultural Research Corporation (EMBRAPA), Brazil*

- Introduction
- Fruit growth and ripening
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Postharvest handling practices
- Conclusions
- References

### **Star apple (*Chrysophyllum cainito* L.)**

*E M Yahia and F Guttierrez-Orozco, Autonomous University of Queretaro, Mexico*

- Introduction
- Fruit development and postharvest physiology
- Maturity and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control

- Postharvest handling practices
- Processing
- Conclusions
- References

**Sugar apple (*Annona squamosa* L.) and atemoya (*A. cherimola* Mill. x *A. squamosa* L.)**

*C Wongs-Aree, King Mongkut's University of Technology Thonburi (KMUTT) and S Noichinda, King Mongkut's University of Technology North Bangkok (KMUTNB), Thailand*

- Introduction
- Fruit development and postharvest physiology
- Maturity
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Diseases, insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- Acknowledgements
- References

**Tamarillo (*Solanum betaceum* (Cav.))**

*W C Schotsmans, Institute of Agricultural Research and Technology, Spain, A East, Massey University and A Woolf, The New Zealand Institute for Plant & Food Research Limited, New Zealand*

- Introduction
- Preharvest factors affecting fruit quality
- Postharvest physiology and quality
- Postharvest handling factors affecting quality
- Crop losses
- Processing
- Conclusions
- References

**Tamarind (*Tamarindus indica* L.)**

*E M Yahia, Autonomous University of Queretaro, Mexico and N K-E Salih, Agricultural Research Corporation, Sudan*

- Introduction
- Fruit growth and ripening
- Maturity and quality components and indices
- Pre-harvest factors affecting fruit quality
- Diseases and pests and their control
- Postharvest handling factors affecting quality
- Postharvest handling practices
- Processing
- Conclusions
- References

**Wax Apple (*Syzygium samarangense* (Blume) Merr. and L.M. Perry) and related species**

*Z-H Shü, Meiho University, Taiwan, C-C Hsieh and H-L Lin, National Chung-hsing University, Taiwan*

- Introduction
- Fruit development and postharvest physiology
- Maturity, quality components and indices

- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Conclusions
- References

**White sapote (*Casimiroa edulis* Llave & Lex)**

*E M Yahia and F Gutierrez-Orozco, Autonomous University of Queretaro, Mexico*

- Introduction
- Fruit development and postharvest physiology
- Maturation and quality components and indices
- Preharvest factors affecting fruit quality
- Postharvest handling factors affecting quality
- Physiological disorders
- Pathological disorders
- Insect pests and their control
- Postharvest handling practices
- Processing
- Conclusions
- References
